

IDGem™

Biometric identity verification fingerprint reader and signature capture tablet

Features

Biometric Fingerprint Capture Sensor

for superb biometric identity verification

Bundled Signature and Fingerprint Software

SigPlus and SigID electronic fingerprint scoring

Electronic Signature Capture Tablet

captures signature's biometric and forensic data

High-Speed Data Conversion

377 points per second for accurate signatures

Multiple Hardware Solutions

available as standalone fingerprint reader or integrated with signature capture tablet

Complete Identity Verification Solution

Robust Biometric signature and fingerprint recognition for extra security and reliability

Applications

- **High-Security Applications**
- **Human Resources Records Administration**
- **Identity verification**

Description

The Topaz IDGem is a combined signature capture and fingerprint sensor terminal for use where ID verification of recognition is a top priority. IDGem retains all of the high-quality signature capture features of the SignatureGem and SigLite tablets with the added benefit of a fingerprint capture sensor for an extra degree of security in determining the identity of a user. IDGem's multiple hardware solutions range from a standalone fingerprint sensor to integrated interactive LCD signature capture/Fingerprint sensor terminal, making it an excellent choice for use in any application where extra security is desired. Software support is available at no extra charge and includes ActiveX, Java, Wintab drivers, and a shared C library for the capture, encryption, formatting, and secure processing of signatures including bmp, tif, jpg, emf, and wmf image formats. Also included is Topaz SigID software for the electronic scoring and recognition of digital fingerprints. Topaz SigPlus software is compliant with eSign, state and federal digital signature regulations by virtue of its ability to bind and encrypt the signature to a document or electronic form data. Examples and software plug-ins are bundled with the tablet. IDGem is available with SignatureGem 4x5, LCD1x5, LCD 4x3, and SigLite LCD tablets with HID or standard USB interfaces.
